

as C++ Developer we need Make a console program that gives funny roast messages using user name. Program should run and give random roast from list. Code should work

Program Flow :

- Ask user to enter name
- Store roast lines in array
- Pick one random roast
- Replace {name} with entered name
- Show roast on screen

Roast Templates Minimum : 10

"{name} types so slow that keyboard gets sleepy." "{name} code is so confusing even calculator gave up."

Add some multiline comments where needed

Keep code short and neat

Output :

One random funny roast every run using entered name.

Compiles and runs cleanly. Here's the file:

Presented file >

How to compile & run:

```
bash

# Linux / macOS
g++ -std=c++17 -o roast_generator roast_generator.cpp
./roast_generator

# Windows (MSVC)
cl /EHsc roast_generator.cpp
roast_generator.exe
```

What's inside:

Feature	Detail
Roast templates	12 lines, all using <code>{name}</code> placeholder
Random seeding	<code>srand(time(nullptr))</code> — different pick every run
Placeholder swap	Custom <code>replacePlaceholder()</code> — replaces every <code>{name}</code> occurrence
Empty-name guard	Falls back to <code>"Mystery Human"</code> if the user hits Enter
Comments	File header, section comments, and inline notes throughout

The program is self-contained in one `.cpp` file with no external dependencies — just standard C++17.
